

Learner Achievement Verification

This is to certify that Alison has awarded BISA SAITEJASWINI RAO living in India the certificate of completion in Actuation Systems in Mechatronics.

Actuation Systems in Mechatronics

Have you ever seen robots or robotic-type systems move some part of their body and wondered about the mechanism that allows them to make such movements? Actuators are responsible for such controlled action in a system. They work based on the signal they get from microprocessors. One such actuator is a motor. The motor is one of the major actuators used in mechatronics as it helps convert electrical signals to mechanical movements.

Modules Studied

Module 1: Actuation Systems in Mechatronics

Module 2: Course assessment
